ServiceTitan export review

SYNTHETIC SAMPLE | No customer data | Not a finding of a platform defect

Cedar Ridge Home Services LLC (fictional)
September 2026 | As of September 30, 2026 | America/New_York

Requested action

Please confirm whether correction PMT740328A requires a QuickBooks object update under the configured integration mode, and provide the related export status. We have a later source correction; its required accounting effect and counterpart status remain unverified.

Observed evidence

Source	Identity / status	Amount
ST original payment	PMT740328 | Exported | Batch 430228	$473.06
ST later correction	PMT740328A | Not Exported | Noncash application correction	$-94.61
QB clearing receipt	QB810302 | debit	$473.06
QB clearing settlement	QB810303 | credit	$473.06
Bank posted credit	DEPOSIT SET870128 | 09/02/2026	$473.06

What the numbers do and do not establish

The original $473.06 receipt and settlement agree in the supplied clearing activity and bank file. The separate -$94.61 application correction changes the source application view to $378.45. It is not evidence of a cash refund or a $94.61 clearing loss. The full QB bank journal and affected customer/invoice records are not included.

Disposition: supported source relationship change; accounting drift not yet confirmed. No adjusting entry proposed.

Timeline and source references

SYNTHETIC SAMPLE | Evidence locators refer to the included CSV files

When	Observed event
2026-09-01T18:00:00-04:00	Original payment exported in accounting batch 430228
09/02/2026	Bank credit posted; clearing settlement shown in QB activity
2026-09-08T11:15:00-04:00	Independent payment application correction created; Cash Refund Confirmed = No
09/30/2026	Review cutoff; no claim made about records outside supplied coverage

Source row locators

File	CSV row	SHA-256 prefix
st_export.csv	29, 130	50b48fc3351743d59acd...

Information needed to resolve

1. Confirm the active export mode and the expected QB object/accounting effect of this correction.
2. Supply per-record export outcome or error trace for PMT740328A.
3. Compare the relevant QB invoice/payment application and full deposit journal.
4. Recommend a remediation path that preserves the original payment and avoids duplicate posting.

Scope and privacy

Customer names are omitted. No full account numbers, credentials or card data are included. Source hashes identify the generated CSVs; complete hashes are in the fixture manifest. The Evidence Document strings in the synthetic CSV are labels, not attached PDF files. This sample itself is the only PDF attached.

Generated for engineering review on October 21, 2026. This document is a reproducible template, not a sent support ticket.
